

# From Seed to Harvest: Planning a Sustainable Garden

## Goals

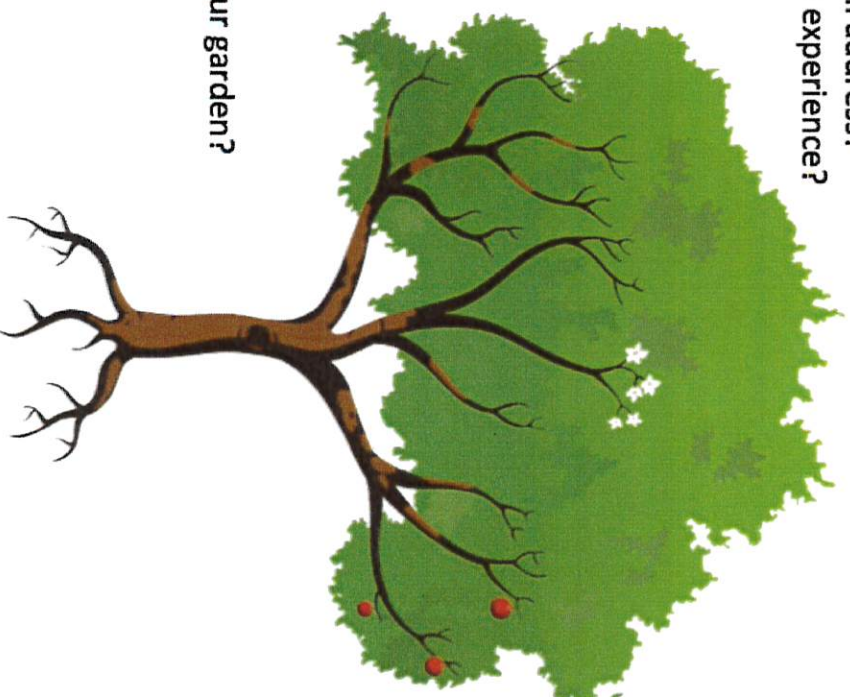

What is the need that the garden will address?  
What do you want to learn from the experience?

## Partnerships

Who can you bring together to form  
your dream 'green' team?

**Organizations  
& Experts**

**Staff**

## Location

Where will you place (or expand) your garden?  
Who will be accessing it?

**Community Helpers**

## Strengthen your Roots

Start small (find your fertile soil) and grow slowly (organically).  
How will you evaluate the process after every cycle?  
How will you share your results with your community & beyond?
